

# Configure Client Access Workstation – IP Address

## 1. First retrieve your ISERIES System Name and TCP/IP Address and enter them here:

- iSeries TCP/IP Address:* 192 . 168 . \_\_\_\_\_ . \_\_\_\_\_
  - i. (On your iSeries key: **cfgtcp** and take option “1”)

**NOTE:** The first three dotted decimal values must be the same across the Network. The fourth numeric value **MUST** be unique per machine.

## 2. Do the following only if this is a “NEW” user otherwise proceed to Step 3.

- To Create a NEW user profile, sign on as QSECOFR, or as a user who has \*SECADM authority. Then type: “*wrkusrprf \*all*”. Make sure the Heading says: “*Work with User Enrollment*”. If not press F21 and chose option “1”. Next copy a user (Option “3”) that you know is currently active and using the System in a similar fashion. Type in a NEW user name, user description, and password. Press enter and the ISERIES will have created a new user profile.

## 3. Change TCP/IP Network Card properties, if not connected to the network otherwise proceed to Step 4.

Click on *Start/Settings/Control Panel/Network/Network Components* (Win9x)

Select on “TCP/IP -> Network/Lan Card” protocol. Then click *Properties* (Win9x)

Right Click on *My Network Places* and click *Properties* (NT/2000/XP)

Right Click on *Local Network Connection* and click *Properties* (NT/2000/XP)

Scroll Down to *Internet Protocol* and click *Properties* (NT/2000/XP)

### IP Address

- Check the box to “*Specify an IP address*”
- Enter an IP address with the same numbers as listed above, changing **ONLY** the number after the last period. That number **MUST** be unique.
- Type 255.255.255.0 for the “*Subnet Mask*”
- Click OK and follow the instructions provided by Windows®

## 4. Place Client Access CD in CD Drive

- Choose “Install Iseries Express” and take all of the defaults.

## 5. After loading Client Access and rebooting

- click Start/Programs/IBM Client Access/Client Access Properties. Click the Service Tab and change “WHEN TO CHECK” to NEVER.

## 6. INSTALL LATEST SERVICE PACK

- Click start -> run and type d:\service pack\setup.exe -> press enter
- Follow the instructions and take all defaults

## 7. Click Start/Programs/IBM Client Access Express/Emulator/Start or Configure a Session

# Configure Client Access Workstation – IP Address

8. Click on the **Configure** box for configuring a **New Session** profile.
9. Type in the **iSeries TCP/IP Address** in the **System Name** box, if it isn't already presented to you.
10. Type in a **unique Workstation ID**.  
(A commonly used convention is the user id. followed by underscore and the letter "A", for the first workstation session then "B" for the second, etc.(i.e. JOE\_A).  
*NOTE:* There is a 10 character limit.
11. After clicking **OK** you should get one, possibly two **sign-on** screen(s). Enter your **ISERIES** user id and password. If applicable check "*Save Password*".
12. Click **File** pull down. Then click on *Printer Setup*. Select a printer and click **OK**
13. Next click on *Edit/Preferences/Appearance/Window Setup*. Under the "Window Title" section uncheck everything except **Session Profile**.
14. Click **File** pull down. Click on *Save As*. Key the same workstation id into the *File Name* box (i.e. JOE\_A). Then enter a description that will be used with the icon for your desktop and click **OK**
15. An "*Add an Icon Message*" Window will Pop up. Click **YES**.
16. Scroll to the top of the list and select *DESKTOP*. Then click **OK**
17. A "*You can click on your New Icon Message*" Window will Pop up. Click **OK**

**Congratulations!!**

**You have created an iSeries workstation connection with an icon that you can click on to start up you workstation session.**
